DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 5, 7, 15, 16, 20 and 21 rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al. Chen et al. disclose positioning a substrate within an atomic layer deposition chamber; flowing a first reactant gas into the atomic layer deposition chamber such that the first reactant gas is adsorbed onto the substrate; flowing an inert gas into the atomic layer deposition chamber to substantially purge the interior of the chamber and leave remaining a residual portion of the first reactant gas; and flowing a second reactant gas into the atomic layer deposition chamber, where the second reactant gas reacts with both the first reactant gas adsorbed onto the substrate and the residual portion of the first reactant gas, thus forming a reacted material layer upon the substrate (column 2 lines 60-67 and column 15). With regards to claim 2, Chen discloses using a second purge. With regards to claims 5, 15, and 21 Chen

Art Unit: 2891

disclose providing a substrate; forming over the substrate a microelectronic layer while employing a deposition method which employs a separately pulsed introduction of a minimum of two reactant materials introduced into a reactor chamber maintained at a pressure of greater than about 500 mtorr (columns 15 and 16). With regards to claims 7, 16, and 21 Chen disclose first reactant gas, a second reactant gas and a pulsed purge gas.

Response to Arguments

Applicant's arguments filed 2/14/04 have been fully considered but they are not persuasive. The applicant contends that Chen et al. fails to teach all the limitations of the claimed invention and teaches away from the claimed invention. The applicant contends that Chen et al. fails to disclose, "the second reactant gas reacts with both the first reactant gas adsorbed onto the substrate and the residual portion of the first reactant gas". Whereas the examiner contends that Chen et al. does disclose the mixing of gasses. Chen et al. disclose " In one aspect, a pulse of tantalum containing compound may still be in the chamber when a pulse of the nitrogen compound enters" (see column 15 lines 38-40).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 2891

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
